MERGERS, ACQUISITIONS & DIVESTMENTS - WHAT ROLE DOES ABSOFT PLAY?

ABSOFT
SOLUTIONS FOR BUSINESS

Absoft identify the need to reduce ERP System transition time frames and mitigate any risk of operational downtime. It is this understanding, coupled with extensive in-house expertise, that has enabled Absoft to successfully support emerging operators to acquire new assets, and facilitate system separations for supermajors divesting from the North Sea, resulting in an unrivalled track record for effective system migrations.

Whether you are:

- Acquiring or divesting assets or subsidiaries
- Transitioning from exploration to production
- Mobilising, commissioning or decommissioning assets
- Undertaking geographic expansion or expanding your service offering

By utilising a wide range of SAP Services, Absoft will work as your partner to ensure a seamless system migration that will enhance management of your strategic investments.

CLASSIC ETL MIGRATION

Classic ETL Migration is most commonly adopted where the Buyer & Seller operate different ERP Systems.

In this scenario, data is Extracted, Transformed into a compatible format, and loaded into the Buyers system.

Ensuring data transformation is performed successfully adds complexity to the transition schedule, often resulting in a considerably long migration schedule.

ADVANCED EL MIGRATION

Where a transition deadline is critical, an Advanced EL Migration is the preferred solution.

Absoft's proprietary table migration programs are proven to migrate data in its entirety whilst retaining data integrity.

By removing the requirement for data transformation and eliminating the restrictions of predecessor/successor data-loading relationships, an Advanced EL Migration significantly reduces the overall transition schedule.

C-RAZE MIGRATION

Operating independently from any extraction-based technique, C-Raze requires a Seller to copy its ERP Systemand erase any data which is not relevant to the Buyer post-transition.

Whilst this solution presents the fastest migration by bypassing any requirement to Extract, Transform or Load data, it requires the Seller to retain significant in-house SAP Expertise to perform the data carve-out successfully.
